

The Prisoners and ex-Prisoners Affairs Commission and the Palestinian Prisoner's Club stated that extremely alarming data has been received about raids and extensive brutalization operations conducted in the prisoners' sections of Nafha prison, during which the repression forces used stun grenades and gas.

The data about the wide-scale raids on Nafha prison and the accompanying collective assaults on the prisoners are part of a series of raids that affected all prisoners in the occupation jails over a full month and are significantly escalating.

The Commission and the Club stated that the likelihood of more martyrs rising in the prisons is increasing, especially since the level of torture and brutalization operations that reach the institutions through prisoners and detainees who were recently released from prisons, as well as from some lawyers who managed to visit, confirm what we previously declared that the occupation adopts these measures to kill the prisoners and carry out premeditated assassination operations against them.

In this context, the Commission and the Prisoner's Club stated: "We will not appeal to the incapacitated international human rights institutions to make an impact in the face of these crimes, in the face of the comprehensive aggression against our people, the ongoing extermination in Gaza, and in the face of the complicity of international powers and their support for the occupation's crimes.

What we only affirm is our call for the free people in the world who have come out in support of the Palestinian right, to continue their support to raise our voice."
